The syllable 'blik' was chosen by me deliberately as a pronounceable group of letters which had hitherto no meaning whatever and therefore could be given a meaning by fiat. Any connexion with the German word 'Blick' meaning 'outlook' was either fortuitous or unconscious. It is interesting that Noam Chomsky the linguist also independently adopted the syllable 'blik' as a meaningless word for a quite different purpose (I forget what purpose). The coincidence is not all that surprising, because English contains rather few 'gaps' for meaningless monosyllables. —R. M. Hare

Liberation consists not in the attempt to codify instabilities, but in the pursuit of their proliferations. Difference and singularity must not be resolved, but allowed to flourish, multiply and become even more subversive of the macropolitical world. The new revolutionary direction 'nomadic' adopts processes/practices impossible to locate on the dominant co-ordinates; they produce their own axes of reference, establish underground transversal connections among themselves, and thus undermine orthodox relationships to production /individual/society. —Adrian Gargett

The world was created in ten words. —Moses de Leon

Raymon Lull took as absolutely fundamental principles for his work a series of nine properties or names of God such as goodness, greatness, power, upon which both Jewish and Islamic mystics meditated. To these divine attributes he assigned the letters B-K. The first letter was not used, as it was reserved for the secret aspect of God, the En Soph. Furthermore, nine relative predicates, cardinal questions, subjects, virtues and vices were assigned to the main algebraic key. By rotating the discs, on which the series of letters was

printed on different rings, one could obtain all possible combinations of these concepts, mechanically answer all possible questions and even invent new ones. The 'Ars Raymundi' exerted a great influence because with his creation Lull gave a new dynamics to thought, freeing it from the restraints of the hierarchical structures of medieval concepts. The concepts were now understood relative to one another, in relationships that were open because they could be reversed.
—Alexander Roob

In Saussure's account of language as a system of signs, a language consists of signs which are the product of contrasts between elements that themselves do not carry meaning but have only a differential function. These basic units are entirely defined by their ability to differentiate higher-level units, signs; the phoneme /b/ is the intersection of the contrasts that differentiate bat from pat, cat, fat, gat, hat, rat, sat, tat, vat, or bet from jet, let, met, pet, net, set, debt, vet. If, when looking at a text, one begins to attend not to signs but to other patterns formed by their constituents — letters or phonemes — then a different perspective opens: the possibility of other signifying processes working beneath or alongside the manifest signs of the text. —Jonathan Culler

Blue is not given any autonomous significance in alchemical colour theories. It generally signifies a moist state of matter, and is treated as a modification of saturnine black, the sign of high spirituality and arcane knowledge. —Alexander Roob

*The practical significance of the enterprise resides
in the criteria it provides for the evaluation of
processes, individual as well as social, which
constitute our lives and projects. Evaluation,
that is, not in any moralistic manner, but that
of assessment/surveying: the question is never
simply one of good or bad, but of specificity in
each case. It is a matter of assessing the qualities
present in a given situation, or the correct/valid
nature of a given process: is it a creative or*
